

Dear Hiring Manager,

I am a Staff Software Engineer specializing in building data platforms and internal engineering systems that help organizations understand, operate, and improve their software at scale. Over the past decade at VMware and Broadcom, I have led the design and delivery of platforms spanning backend services, APIs, data pipelines, and analytics infrastructure used across large engineering organizations.

Much of my work has focused on turning complex engineering ecosystems into reliable platforms that teams can depend on. This includes architecting VMware's internal R&D data warehouse and contributing to the data platform behind the Secure Release Platform initiative, improving traceability and auditability across the software supply chain. I am particularly drawn to roles where strong software engineering and data infrastructure come together to enable better decision-making, reliability, and system-wide visibility.

I would welcome the opportunity to bring this experience to your team and contribute to building platforms that support scalable, high-quality engineering. Thank you for your time and consideration.

Best,
Phillip Kesling
